ISA Cadence — Dial-First, High-Velocity Outreach

Audience: Kareem. **Purpose:** Day-by-day dial cadence per preset. Replaces the mail/SMS-heavy cadence in [SOP-OUTREACH-CADENCE.md](#), which remains Mike's playbook for the SMS channel. Kareem's channel is **phone first**.

The shift from the old cadence

The previous cadence (designed for Mike, SMS-first) put the first phone attempt on **Day 4**. That's three days of cold-aging on a record that's been losing equity, time, and emotional bandwidth every hour. Kareem inverts that — **dial Day 1, dial Day 2, dial Day 3, dial Day 5, dial Day 7**. SMS becomes a **support channel** for his calls (sent before/after, not instead of).

Why dial-first works for distress ICP: - A 90-second voice conversation builds more trust than 10 SMS exchanges - Distress homeowners are often phone-fatigued from predators — a calm Ohio voice cuts through pattern-match - Voice captures motivation category, urgency, ballpark, condition (UMBC) on the first connect; SMS doesn't - TARP only works on voice — it cannot be set or matched over text

Velocity targets (calibrated to Kareem's schedule)

Targets ramp over four weeks. Dials, not connects. Connect rate target: 25-35% (industry-typical for distress).

Week	Dials/day	Connects/day	Handoffs to Danielle/day
1 (training)	50-60	12-18	0-1
2	70-80	18-25	1-2
3	90-100	22-30	2-3
4+ (cruise)	100-120	25-40	2-4

Dial budget by day length:

Day	Active hours	Dial-block hours	Cruise dial target
Mon (12-6)	6	~4	60-75
Tue / Wed / Thu (9-6)	9	~6	100-120
Fri (9-5)	8	~5.5	90-100
Sat (1st + 3rd, 9-12)	3	~2	30-40

Aaron can override these once he sees Week 1 data. Targets are a starting point, not a contract.

Universal cadence framework

Every distress lead Kareem works gets this base cadence unless they STOP, convert, or hard-decline:

Day 0 Record lands in DataSift overnight (autonomous)
Day 1 DIAL #1 + VM if missed + same-day SMS (Mike's day-1 SMS already fires; K
Day 2 DIAL #2 (different time of day from Day 1 – morning/afternoon swap)
Day 3 DIAL #3 + tested VM variant
Day 5 DIAL #4 (only Tier 1-2 phones at this point)
Day 7 DIAL #5 + nurture SMS
Day 14 DIAL #6 + check whether mail piece #1 landed
Day 30 DIAL #7 (status check)
Day 60 DIAL #8 + check mail piece #2
Day 90 Recycle through the cadence (only for status=Not-Yet, never for Sold/DNC

Cadence overrides per preset: see each preset section below.

When to STOP the cadence permanently

Stop dialing **forever** for any of these:

Trigger	Tag in DataSift	Action
Reply STOP via SMS / verbal “do not call”	do_not_contact	Never dial again. TCPA compliance.
Status: Sold (someone else bought it)	Sold	DataSift Sold Property Cleanup sequence fires automatically
Status: Closed (we closed the deal)	Closed	Move to post-close workflow
Hard decline + concrete reason (“son’s moving in,” “wife inherited”)	not_interested + reason in Notes	Recycle in 90 days only if reason changes
Bad number confirmed (3 dials, all “wrong number”)	bad_number	Drop. Note for SiftStack pipeline review.
Returned mail (Mike’s flag) + 3 dial misses	bad_address	Drop.

Distress-state-driven recycle rules

These override the standard cadence. Kareem tags the dominant distress state during the connect; recycle timing follows the state.

Distress state	Recycle in	Reasoning
#1.1 Shame	14 days	They need a moment to process the call. Coming back in 2 weeks lets the shame thaw.
#1.2 Denial (“bank’s working with me”)	30 days	The bank conversation usually stalls within 30 days. Re-approach when reality has caught up.
#1.3 Learned helplessness	21 days	Energy returns slowly. Don’t push, but don’t disappear.
#1.4 Suspicion-of-vultures	7 days (with SMS first)	Trust thaws faster if Kareem is consistent + transparent. Send a warm SMS Day 5, dial Day 7.
#1.5 Decision fatigue	14 days	Wait for cognitive bandwidth to return.
#1.6 Grief (probate)	30-60 days	Patience compounds. The probate runway is on our side.
#1.7 Fear of judgment	14 days	Re-approach with explicit confidentiality reframe.
#1.8 Magical thinking (“brother’s lending me money”)	30 days	The Hail Mary almost always doesn’t pan out. 30 days = enough time for reality to set in.

Tag the distress state in DataSift so the next dial picks up where Kareem left off. Suggested tag format: `distress_shame`, `distress_denial`, `distress_helpless`, `distress_suspicion`, `distress_fatigue`, `distress_grief`, `distress_judgment`, `distress_magical`.

Preset-Specific Cadences

§1 Lis Pendens (Foreclosure Just Filed)

Why dial-heavy: the prospect has 4-12 weeks before sheriff sale. We have time and we want to be the calm voice they hear early — before the predators start calling.

Day	Action	Notes
Day 1 (AM)	DIAL #1 + LP opener	Mike's Day 1 SMS already fired; Kareem's call references that "you may have seen my colleague's text"
Day 1 (PM)	If missed: DIAL #1.5 + VM	Different time of day, same opener
Day 2	DIAL #2	Alternate time-of-day from Day 1
Day 3	DIAL #3 + tested VM variant	If still no connect, send confirmation SMS: "Hey [first], Kareem from WHO again — couple texts/calls about [property]. No pressure. [number]"
Day 5	DIAL #4	Tier 1-2 phones only (skip Tier 3+ at this point)
Day 7	DIAL #5 + nurture SMS	"Hey [first], FYI Ohio has a 30-day right-to-cure window after lis pendens — quick rundown if helpful: [link]. [number]"
Day 14	DIAL #6	Reference any prior contact: "Wanted to circle back — has a sheriff sale date been set yet?"
Day 21	DIAL #7 (status check)	Sale-date check is the load-bearing question
Day 30	DIAL #8	"Things change — wanted to see where you landed"
Day 60	DIAL #9 (final pre-recycle)	If no engagement: tag <code>lp_recycle_q90</code>
Day 90+	Quarterly recycle	Re-enter cadence Day 1

Escalate to Aaron if: - Property worth >\$300K with significant equity - Lead wants to close within 21 days - Lead has multiple properties - Lead asks "what's your offer?" (Boxing Objections rule kicks in)

§2 Sheriff Sale (>21 days to auction)

Why dial-heavy: sale is on the calendar. Every day matters. Mail/SMS aren't fast enough.

Day	Action	Notes
Day 1 (AM)	DIAL #1 + SS opener	Standard urgency posture
Day 1 (PM)	If missed: DIAL #1.5 + VM	
Day 2 (AM)	DIAL #2	
Day 2 (PM)	DIAL #2.5 + tested VM	
Day 3	DIAL #3	
Day 5	DIAL #4 + SMS deadline math	"Hey [first], [auction] is X days out. Quick chat?"
Day 7	DIAL #5	
Day 10	DIAL #6	
Day 14	DIAL #7 + mail piece check	Cross over into <21-day urgency mode at Day 14

§3 Sheriff Sale (≤ 21 days to auction — URGENCY MODE)

Day	Action	Notes
Day 1 (AM + PM)	2x DIAL + tested VM each	Two attempts same day
Day 2 (AM + PM)	2x DIAL + tested VM	
Day 3 (AM)	DIAL + email if available	
Day 5	DIAL + SMS deadline math	"[first], [auction] = X days. Last chance. [number]"
Day 7	DIAL + final VM	
Day until sale	Daily DIAL + daily SMS	"Day X before [auction]. Still time. [number]"

Escalate to Aaron if: - Sale ≤ 14 days + any willingness signal - Equity above payoff (Zestimate vs. payoff math) - Lead says "yes" to a Danielle call

§4 Probate

Why dial-light vs. foreclosure: grief deserves space. Probate is a 6-9 month process. Patience compounds.

Day	Action	Notes
Day 1	DIAL #1 (probate opener)	If they're in active grief (#1.6) — back off, send SMS summary, 30-day recycle
Day 3	DIAL #2 only if Day 1 didn't connect	Skip if Day 1 ended in grief back-off
Day 7	Nurture SMS	"[first], hope the week's been manageable. No pressure on [property] — just wanted to check in."
Day 14	DIAL #3 (gentler probate opener)	"Wanted to circle back — how's the estate process going?"
Day 30	DIAL #4 + mail piece check	Reference court timeline naturally
Day 45	DIAL #5	"Things settling down at all?"
Day 60	DIAL #6	
Day 90	DIAL #7 (probate-closing check)	"Where's the estate at — closing soon?"
Day 120+	Quarterly nurture	Until probate closes or status changes

Escalate to Aaron if: - PR has Letters of Authority + says "yes, ready to sell" - Property is vacant + costing money to maintain - Multiple heirs aligned on selling - Property worth >\$300K

§5 Redemption Window (Post-Sheriff-Sale)

Why dial-heavy and time-compressed: redemption windows are short — typically 0-30 days. Every dial is a clock-watching event.

Day	Action	Notes
Day 1 (AM + PM)	2x DIAL + tested VM	
Day 2 (AM)	DIAL + educational SMS	"[first], here's a quick guide on Ohio redemption rights: [link]. [number] for questions."
Day 3	DIAL	
Day 5	DIAL + deadline math SMS	
Day 7	DIAL + email if available	
Day until window expires	Daily DIAL + daily SMS	"[first], X days left to act on [address]. [number]."

Escalate to Aaron immediately if: - Lead says "yes, help me redeem" - Window has <14 days remaining - Property has clear equity above sale price (always — that's free money)

Bulk Top-250 Distressed List Cadence (the second queue)

In addition to the FTM courthouse cadence above, Kareem also dials a **rotating Top-250 distressed list per county** (Franklin / Montgomery / Greene = 750 total active records on the bulk side at any time). This list is refreshed monthly and represents the highest-distress records DataSift surfaces — vacant, tax-delinquent, high-equity, absentee, code-violation, multi-distress overlap.

How Bulk Top-250 differs from FTM

Dimension	FTM (courthouse)	Bulk Top-250
Source	SiftStack scrapers (probate / foreclosure / redemption)	DataSift bulk distressed-data filters
Volume	~30-80 records/day across all presets	750 active records (250 × 3 counties)
Distress signal	Specific event (probate filed, sheriff sale scheduled)	Multi-factor score (vacancy + equity + tax + absentee)
Per-record context	Deep — case number, fiduciary, decedent, auction date	Shallow — just the property + owner name + tags
Cadence intensity	High touch, long runway (90+ days)	Lighter touch, faster cycle (3-week rotations)
Conversion rate	Higher per dial (event-driven motivation)	Lower per dial, but volume compensates

The 3-week rotation cycle (per county)

Each county's 250 records get worked over 3 weeks before the list refreshes:

Week	What Kareem does	Touches per record
Week 1	First-pass dial + VM + same-day SMS	1 dial + 1 VM + 1 SMS
Week 2	Second-pass dial only on Tier 1-2 phones (skip Tier 3+)	1 dial + 1 VM if needed
Week 3	Final-pass dial on Tier 1 only + nurture SMS to all	1 dial + nurture SMS

After Week 3, the record is recycled into the **monthly nurture pool** (1 SMS per month from Mike, no Kareem dial) until the bulk list refreshes and a new Top-250 takes its place.

Daily Bulk Top-250 dial budget

Bulk dials happen in the **afternoon block** (after the FTM AM block). Cruise targets:

Day	FTM dials (AM)	Bulk dials (PM)	Total
Mon (12-6)	25-30	30-40	55-70
Tue/Wed/Thu (9-6)	35-45	55-75	100-120
Fri (9-5)	30-40	50-60	90-100
Sat (1st/3rd, 9-12)	20-30	10-15	30-45

Bulk Top-250 script differences

Same framework (TARP, four options, UMBC) but the **opener changes** because the prospect doesn't have a single specific event. Use this opener:

"Hi, is this [first_name]? Kareem with Wright Home Offer in [county] County. I'm a local Ohio buyer and I'm calling because your property at [property_address] popped up on a list of homes that match what I usually buy — vacant or distressed properties where the owner might be open to a fast sale. I have three or four options for folks in your spot, and not all of them require selling. Worth five minutes to walk through them?"

Why this works: - "Popped up on a list" is honest — beats pretending we know something specific
 - "Vacant or distressed properties" — they self-identify which one they are - Same four-options framing carries through

Bulk Top-250 priority order within the afternoon block

When Kareem opens the bulk queue, work in this order:

1. **Vacant + High-Equity** (the goldmine — owner has wealth and a non-occupying property)
2. **Tax-Delinquent + Absentee** (clock running on tax sale + remote owner = motivated)
3. **Code Violation + Vacant** (city pressure + non-occupying)
4. **Long-Term Absentee** (5+ years out of state)
5. **Multi-distress overlap** (any record with 3+ distress flags)
6. **Single-distress** (just one flag — vacant only, or absentee only)

DataSift's filter presets in the "01 Bulk Sequential Marketing" folder match these — Kareem opens that folder and works the presets top-to-bottom.

Bulk Top-250 escalation triggers

Same as FTM — escalate to Aaron when: - Property worth >\$300K with significant equity - Owner says “yes, send Danielle” on the first call (rare on bulk — flag it) - Multi-property owner (could be a portfolio buyout opportunity) - Lead asks “what’s your offer?” — same Boxing Objections rule

Phone tier discipline (which records get dialed which days)

DataSift records carry phone tier scores from the Trestle / Tracerfy enrichment step. Tier dictates dial intensity:

Tier	Score	Treatment
Tier 1	81-100	100% same-day dial. Multi-attempt aggressive cadence. Every dial day.
Tier 2	61-80	Dial Day 1, 2, 3, 5, 7. Then tier-2 nurture pace.
Tier 3	41-60	Dial Day 1, 3, 7 only. SMS Mike’s lane.
Tier 4	21-40	Mail-only. Kareem does NOT dial.
Tier 5	0-20	Drop. Litigator-flag risk. SiftStack should auto-tag.

Top-of-day priority rule: every preset has 50+ records on a given morning. Kareem’s first 2 hours go to the **top 2 phone-tier records per preset**, not bottom-tier sweeps. The top 2 of 50 are where the day’s handoff yield lives.

Smrtphone power-dial setup

Kareem’s dial budget is impossible without power-dialing. Smrtphone is integrated into REISift and supports multi-line parallel dial.

- **Default:** 3-line power dial during dial blocks

- **Drop to 2-line** when working sheriff-sale URGENCY records — those need full attention on the connect
- **Drop to 1-line (single-call)** when calling a probate Day 1 — never power-dial a grieving family

Voicemail drop should be enabled with a tested, neutral pre-recorded VM as fallback when Kareem is mid-conversation on another line.

What a typical dial day looks like

(Full detail in [ISA-DAILY-PLAYBOOK.md](#). Quick version here.)

9:00–9:30 — DataSift pull, preset queue review, top-2 prioritization per preset **9:30–11:30** — Dial Block #1 (Tier 1-2 records, top 2 of every preset) **11:30–12:00** — Hot-handoff window: anyone Kareem connected with in Block #1 who needs Danielle, REISimpli webform + group text the team thread **12:00–12:30** — Lunch **12:30–2:30** — Dial Block #2 (Day 2/3/5/7 follow-ups) **2:30–3:00** — Recycle queue (records due for re-attempt today) **3:00–4:30** — Dial Block #3 (afternoon attempts on records that didn't connect AM) **4:30–5:30** — DataSift hygiene: tag updates, status updates, callback scheduling **5:30–6:00** — End-of-day note in DataSift Activity tab + tomorrow's prep
