ISA Daily Playbook — Hour-by-Hour Day Shape

Audience: Kareem. **Purpose:** What every working day looks like, hour by hour, broken out by the actual schedule (Mon 12-6, Tue-Thu 9-6, Fri 9-5, 1st + 3rd Sat 9-12). Print this. Stick it next to the monitor.

The “top 2 of 50” rule (priority order at the start of every dial block)

Every preset queue has 30-80 records on a given morning. Kareem **does not** dial top-to-bottom alphabetically. He works in this order:

1. **Top 2 phone-tier records per preset** — Tier 1 (81-100) first, Tier 2 (61-80) next. Across 7 active presets, that’s 14 records that get dialed before anything else. Highest-density yield window of the day.
2. **Sheriff Sale ≤14 days to auction** — urgency mode, regardless of tier
3. **Redemption Window ≤14 days remaining** — same logic
4. **Day 2/3 follow-ups** from yesterday’s connects (the warmest records on the board)
5. **Sheriff Sale 14-30 days to auction**
6. **Lis Pendens Day 1** (first-to-market window)

7. **Probate Day 1** (less urgent but high-empathy — should not pile up)

8. **Day 7+ nurture cadence**

When Kareem is behind on a busy day, this order tells him exactly what to drop and what to keep.

Tuesday / Wednesday / Thursday — the core 9-hour day

The day splits into **AM = FTM (courthouse data, high quality, low volume)** and **PM = Bulk Top-250 (high volume, distressed-data lists)**. AM is when prospects are home + answer rates are highest; reserve the FTM (highest-yield) records for that window.

Time	Block	Activity
9:00–9:15	Morning prep	Open DataSift. Read Mike’s 9:00 morning post on team group text (overnight new records, hot SMS responders, DNC flags, pull-back records). Reply with today’s plan per ISA-MIKE-COLLAB.md .
9:15–9:30	Top-2 prioritization	Apply FTM priority order. Build AM dial list in Smrtphone.
9:30–11:30	FTM Dial Block #1 (top 2 per courthouse preset, Tier 1-2)	Target: 30-40 dials. Power-dial 3-line default; drop to 1-line for probate Day 1.
11:30–11:45	Hot handoff window	Anyone Kareem connected with in Block #1 who scheduled with Danielle: REISimpli webform + group text on the team thread + confirmation SMS to seller. Do this before lunch.
11:45–12:30	Lunch	Step away. Phone off if possible.
12:30–1:00	Bulk Top-250 prep	Open today’s bulk queue: which county is up today (Franklin / Montgomery / Greene rotation), which sub-preset (vacant+equity / tax-delinquent / code-violation), which week of the 3-week cycle
1:00–1:05	Mid-day sync post	Group text the team thread per ISA-MIKE-COLLAB.md : AM dial count, AM connects, anything to deconflict with Mike for PM
1:05–3:30	Bulk Top-250 Dial Block #2	Target: 40-55 dials. Power-dial 3-line. Lighter-touch script (the Bulk opener, not the FTM opener — see ISA-CADENCE.md).
3:30–4:00	Recycle queue review	FTM callbacks due today + bulk Tier 1 missed-connect retries. Build Block #3 list.

Time	Block	Activity
4:00–5:00	Dial Block #3 (FTM follow-ups + Bulk afternoon push)	Target: 20-30 dials. People answer better afternoon than morning. Mix FTM Day-2/3 records with Bulk repeat attempts.
5:00–5:30	DataSift hygiene + REISimpli handoffs	Tag updates (FTM + bulk), status updates, callback scheduling, REISimpli webform submissions for any pending qualified leads
5:30–6:00	End-of-day group text + DataSift Activity note	EOD post on team thread per template below. Mike confirms with his EOD. Aaron reads.

Cruise-pace target on a 9-hour day: 100-120 total dials (35-45 FTM + 55-75 bulk), 25-40 connects, **target 2 set appointments (= 10/week, KPI floor).**

Monday — 12:00 PM – 6:00 PM ET (6-hour day)

Monday is a half-day for Kareem. Mike has been working SMS over the weekend, so Monday's queue is **warmer than other days** — many records have responded to weekend SMS and need a phone follow-up. Monday is mostly FTM-focused; bulk Top-250 takes a back seat to weekend-SMS-responders.

Time	Block	Activity
12:00–12:15	Weekly prep	Read Aaron’s Friday team-text summary + Mike’s weekend SMS responses + Monday morning post
12:15–12:30	Warm-response prioritization	Weekend SMS responders go first; FTM top-2 second; bulk Top-250 third
12:30–2:30	FTM Dial Block #1 (warm responders + Tier 1-2 FTM)	Target: 30-35 dials
2:30–2:45	Hot handoff window + group text mid-shift sync	
2:45–3:00	Brief break	
3:00–5:00	Mixed Block #2 (FTM Day 2/3 follow-ups + Bulk Top-250 — current county/preset)	Target: 25-30 dials
5:00–5:45	Bulk Block #3 (afternoon attempts on Top-250 misses)	Target: 15-20 dials
5:45–6:00	DataSift hygiene + EOD group text	

Cruise target on Monday: 60-75 dials (mix of FTM + bulk), 15-25 connects, 1-2 set appointments.

Friday — 9:00 AM – 5:00 PM ET (8-hour day)

Friday is a slightly compressed day, and afternoon connect rates drop late in the day (people checking out for weekend). Aaron’s Friday retro lands in the last hour.

Time	Block	Activity
9:00–9:15	Morning prep	
9:15–9:30	Top-2 prioritization	
9:30–11:30	Dial Block #1	Target: 30-40 dials
11:30–11:45	Hot handoff window	
11:45–12:30	Lunch	
12:30–2:30	Dial Block #2 (follow-ups + recycle)	Target: 25-30 dials
2:30–3:00	Recycle queue review	
3:00–4:00	Dial Block #3 (final afternoon push — connect rates start dropping after 4)	Target: 20-25 dials
4:00–4:30	DataSift hygiene + final REISimpli handoffs	
4:30–5:00	Weekly retro with Aaron	30-min phone call: numbers, calls, distress-state distribution, what to adjust next week

Cruise target on Friday: 90-100 dials, 22-30 connects, 2-3 handoffs.

1st + 3rd Saturday — 9:00 AM – 12:00 PM ET (3-hour day)

Saturday is a weekend-coverage day. Many distress homeowners are home, and competition is lower (most predator dialers don't run weekends).

This is the highest-connection-rate day of the week. Treat it that way.

Time	Block	Activity
9:00–9:15	Saturday prep	Pull Friday/Saturday-overnight new records + recent SMS responses
9:15–11:30	Dial Block #1 (high-priority records only — Tier 1, urgent SS, urgent RW)	Target: 30-40 dials
11:30–11:45	Hot handoff window	If Danielle is on call rotation, ping her. Otherwise, schedule for Monday and confirmation SMS the seller.
11:45–12:00	DataSift hygiene + Saturday end-of-day note	Group text on the team thread — brief. See you Monday.

Cruise target on Saturday: 30-40 dials, 10-15 connects, 1-2 handoffs.

What every dial block requires Kareem to do

Before each dial block:

1. Verify Smrtphone is logged in and integrated with REISift
2. Confirm DataSift is open with today's filtered queue
3. Have [ISA-CALL-SCRIPTS.md](#) open in another window/tab — by preset section
4. Have voicemail-drop pre-recordings selected for each preset
5. Water + a notepad for verbatim quotes during connects

During each dial block:

- Tag every dial in DataSift (`dial_day_N` , `voicemail_left` , `connected`)
- After each connect: 30-60 seconds of post-call notes in DataSift Notes field
- After each qualified connect: don't wait — submit REISimpli webform within 15 minutes

After each dial block:

- 5-min hygiene pass: status updates, callback scheduling, distress-state tags

End-of-day group text template

Posted to the team group text thread at end of every working day (5-15 minutes max):

```
KAREEM EOD – [date]
Dials: [N]
Connects: [N] ([conn rate %])
VMs left: [N]
UMBC captures: [N]
Handoffs to Danielle: [N – list with property addresses]
Handoffs to Aaron: [N – list]
Listing pivots: [N]
Recycles scheduled: [N]
DNC adds: [N]

Standout call: [1-2 sentences – best conversation of the day, why]
Stuck on: [optional – one objection or situation that didn't resolve cleanly]
Tomorrow's top priority: [what's top of the queue tomorrow]
```

Weekly rhythm

Day	Special activity
Mon	Read weekend SMS responses; note any handoffs that need warm reset
Tue	Cruise day — full 9 hours, max-volume
Wed	Cruise day; one Aaron live-listen mid-day
Thu	Cruise day; mid-week tag/status hygiene sweep
Fri	Cruise day + 4:30-5:00 weekly retro with Aaron
1st/3rd Sat	High-connect day, low-volume — focus on quality

What “good” looks like end-of-week (steady-state, post-Week-4)

- 450-550 dials/week (FTM + Bulk combined)
- 110-180 connects/week (25-35% connect rate)
- 35-60 UMBC captures/week
- **7-10 set appointments to Danielle/week** ← the KPI gate

- Pace toward 4 signed contracts/month (Aaron tracks via Danielle's REISimpli pipeline)
 - 0 hard flags
 - 0 records tagged Dead
 - 100% of handoffs have complete REISimpli notes + team-thread group text + seller confirmation SMS
 - All 3 daily Mike+Kareem touchpoints executed (morning post, mid-day sync, EOD recap)
-

What “bad week” indicators to flag to Aaron

If any of these hit, text Aaron on the team thread same-day — don't wait for Friday retro:

- Connect rate <20% for 2+ days (phone tier issue or call timing issue)
 - Zero handoffs for 3+ consecutive days (script + framework issue)
 - Any hard flag (price quote, “other offers” said, missed Permission-to-say-no)
 - Any TCPA-adjacent situation (unclear DNC, prospect threatening legal)
 - Repeated Smrtphone or REISimpli technical failure
 - Repeated tag confusion that's slowing dial pace
-
