Mike + Kareem Daily Collaboration Protocol

Audience: Mike (SMS channel), Kareem (phone channel), Aaron (oversight). **Purpose:** The two of them work the same records on different channels. Without a tight handshake, they will step on each other's calls, miss handoffs, and confuse prospects. This doc is the structured daily dialogue Aaron wants visibility into.

The mental model

Mike runs the **SMS channel** (200+ texts/day, mostly automated through DataSift sequences with manual responses). Kareem runs the **phone channel** (100-120 dials/day across FTM + bulk Top-250).

They're working the **same records** in DataSift but on different channels. Coordination happens through three things:

1. **DataSift tags** — the source of truth for who has done what to which record
 2. **Group text dialogue** — the team thread, not a separate Mike-Kareem channel
 3. **Daily live touchpoints** — three structured moments per day where they actually talk
-

The three daily touchpoints (Aaron sees all three)

Touchpoint 1 — Morning Standup (group text, 5 min, async)

When: Tue–Fri by 9:15 AM ET. Monday by 12:15 PM (Kareem’s first hour). **Who posts first:** Mike. Kareem replies. **What goes in:**

Mike’s morning post (template):

- * MORNING — [date]
- New records overnight: [N FTM] + [bulk count if Top-250 refreshed]
- SMS responses overnight to triage: [N]
- Hot SMS responders worth a Kareem dial today: [list 1–3 with addresses]
- Any DNC / STOP / opt-outs to flag: [list]
- Anything Kareem should NOT call today (Mike mid-conversation): [list]

Kareem’s reply (template):

- Acknowledged. Today's plan:
- FTM Block #1: top 2 per preset, plus your hot SMS responders [verify list]
 - Bulk Top-250 Block: [Franklin / Montgomery / Greene – pick the day's county]
 - Callbacks scheduled: [N]
 - Targeting [N] handoffs to Danielle today

Aaron sees: the dialogue happens on the team group text — Aaron reads it passively. If either of them skips the post, Aaron pings.

Touchpoint 2 — Mid-day Sync (group text, 2 min)

When: Tue–Fri 1:00 PM. Monday 3:00 PM (mid-shift for Kareem). Skipped on Friday (replaced by retro). **Purpose:** real-time deconfliction — who’s mid-conversation with whom, what objections are coming up across both channels, are any patterns emerging.

Either of them posts:

- * MID-DAY [date]
- Mike: connected with [N] via SMS this AM — biggest theme: [pattern]
- Kareem: dialed [N], connected [N], hit [N objection X times]
- Anyone we should NOT touch this afternoon: [list]
- Hot lead I'm working: [property + status] (so the other doesn't accidentally r

Touchpoint 3 — End-of-Day Recap (group text, 5 min)

When: End of Kareem's shift (5:30-6:00 Tue-Thu, 4:30 Fri, 12:00 Sat). **Who posts first:** Kareem (he's the closer of the day). Mike confirms.

Kareem's EOD post (template — uses the same template as in [ISA-DAILY-PLAYBOOK.md](#)):

```
KAREEM EOD — [date]
Dials: [N] | Connects: [N] | UMBC captures: [N]
Handoffs to Danielle: [N — list addresses]
Standout call: [1-2 sentences]
Stuck on: [optional]
Tomorrow's top priority: [...]
```

Mike's confirm + add:

```
MIKE EOD — [date]
SMS sent: [N] | Responses worked: [N]
Hot responders queued for tomorrow: [list]
Records flipped to Mike-pause (don't call): [list]
Records flipped to Mike-done (Kareem can call): [list]
```

Aaron's daily read: scans both, notes patterns over the week, flags issues at Friday retro.

DataSift tag handshake — who does what to which record

This is the structural piece. The group text is fast coordination; the tags are the durable record.

Tag	Who applies it	Meaning
mike_active_sms	Mike	Mike is mid-conversation via SMS — Kareem does not call this record
mike_paused	Mike	Mike sent something and is waiting for response — Kareem can call to add a voice layer
mike_done	Mike	Mike has stopped working this record (no response after N attempts, or he's punted to Kareem)
kareem_active_call	Kareem	Kareem is mid-conversation / has a callback scheduled — Mike does not text this record
kareem_left_vm	Kareem	Kareem left a voicemail — Mike can send a "saw my colleague Kareem reached out, here's a different angle" SMS as a layer
kareem_done	Kareem	Kareem has exhausted dials for this record — Mike resumes SMS-only
joint_hot	Either	Both Mike and Kareem think this lead is moving — collaborate live in group text
pull_back	Either	Stop everything on this record (DNC, prospect angry, attorney involved). Tagged immediately, both stop.

Rule: before either of them touches a record, **check the tags first**. If `mike_active_sms` is on it, Kareem skips and works the next record. If `kareem_active_call` is on it, Mike does not send SMS. **No exceptions** — overlapping touches are how prospects get burned.

Shared queue ownership

Record type	Primary owner	Secondary support
FTM Probate Day 1-7	Kareem (calls)	Mike (SMS only after Kareem's first connect or VM)
FTM Sheriff Sale ≤ 14 days	Kareem (urgency)	Mike (parallel SMS, max velocity)
FTM Sheriff Sale > 14 days	Co-owned	Mike opens Day 1 SMS; Kareem dials Day 1 PM
FTM Lis Pendens	Co-owned	Same — Mike Day 1 AM, Kareem Day 1 PM
FTM Redemption Window	Kareem (urgency)	Mike parallel
Bulk Top-250	Kareem (volume)	Mike opportunistically — sends SMS to Kareem's connects who didn't pick up

The **co-owned** records are where the daily handshake matters most. Mike's morning post says "I sent SMS to records X, Y, Z this AM"; Kareem's reply says "got it, I'll dial X this morning, Y this afternoon, Z tomorrow." That's the deconfliction.

Joint calls — when Mike + Kareem work a lead together

Sometimes a prospect responds to Mike's SMS asking a specific question Mike can't answer well over text ("how does the redemption process actually work?"). The cleanest move is for **Mike to hand the conversation to Kareem live** rather than try to text-explain.

Mike's hand-off SMS to the prospect: > "Great question — my colleague Kareem can walk you through that on a quick call (he handles the foreclosure-side stuff). He's free now — okay if he calls you in the next 5 minutes? Or what's a better time?"

Mike then group-texts Kareem: "[address] — [first_name] wants the redemption process explained. Texting them you'll call in 5. Phone is [number]."

Kareem dials within the promised window. This is one of the highest-conversion paths Mike + Kareem have — the prospect is already warm from the SMS and now hears a calm voice. Aaron wants to see this happen at least 1-2x/day once they're in cruise pace.

Practical collaboration during onboarding (Week 1-2)

In Kareem's first two weeks, Mike's role is partly **co-trainer**. Specific shared activities (also in [ISA-ONBOARDING.md](#)):

- **Day 2:** Mike sits in (or listens via Smartphone live-listen if remote) on Kareem's first 5-10 calls, gives feedback after each.
 - **Day 3-5:** Daily 15-min debrief between Mike and Kareem, end of day, before Kareem's EOD post. What worked, what jammed up.
 - **Week 2:** Roleplay sessions Mike + Kareem run together — Mike plays prospect, Kareem reads scripts. Specific scenarios in [ISA-ONBOARDING-WORKBOOK.md](#).
 - **Week 2 onward:** Tag-handshake audit — Mike pulls 10 records each Friday, checks whether Kareem applied tags correctly. Reports to Aaron at Friday retro.
-

What Aaron is watching for in the dialogue

Aaron reads the group text passively every day. Specific things he flags:

- **Missing morning post** — either Mike or Kareem skipped → Aaron pings
 - **Mid-day sync skipped 2+ days in a row** — pattern → Aaron addresses at Friday retro
 - **EOD post missing handoff details** — quality issue → Aaron addresses next day
 - **Tag mismatches** (Kareem dialed a record Mike had `mike_active_sms` on) — process violation → same-day correction
 - **Repeated objections coming up across both channels** — signals script needs tuning → Aaron updates [ISA-CALL-SCRIPTS.md](#)
 - **Patterns Mike + Kareem flag together** (“everyone in Montgomery is asking about X right now”) — feeds into weekly intel + Aaron decides whether to adjust SOP
-

What Mike + Kareem are NOT for

- **Texting the prospect at the same time as a call.** One channel at a time per record. Tags enforce this.
 - **Disagreeing about a lead in front of the prospect.** If one of them thinks a lead is hot and the other thinks it's dead, they hash it out in group text first, then either one engages.
 - **Replacing each other.** Mike does NOT make outbound dials (his role is SMS). Kareem does NOT manage SMS sequences (his role is calls). They support each other, they don't substitute.
-

Escalation when collaboration breaks

Situation	Action
Mike + Kareem disagree on a lead's status	Both flag in group text, Aaron makes the call within 4 hours
Tag mismatch causes a duplicate touch	Pull-back tag immediately, apologize to prospect on next channel, document in EOD post, retro at Friday
Mike or Kareem repeatedly skips a touchpoint	Aaron 1:1 with whoever skipped, before it becomes a habit
Prospect complains about overlapping outreach	Pull-back tag, same-day apology SMS from Mike, log incident, retro at Friday
