

SOP — Friday Weekly Review

Audience: Mike + future caller (run weekly), Aaron (review weekly).

Purpose: Catch trends, tune the system, flag issues before they compound. 30-min ritual every Friday at 4:00 PM.

Why this matters

Daily ops can absorb you. Without a weekly step-back, you'll:

- Miss patterns (e.g., "Franklin probate quality has been dropping for 3 weeks")
- Burn out on the same broken workflow without fixing it
- Lose track of what's actually working vs what feels productive
- Forget to give Aaron the high-signal feedback he needs to tune the pipeline

This is a **30-minute ritual every Friday at 4:00 PM**. Block your calendar for it.

The 30-minute structure

00:00 - 00:05	Numbers (5 min)
00:05 - 00:15	Wins + Misses (10 min)
00:15 - 00:25	Issues + Asks (10 min)
00:25 - 00:30	Next-week priorities (5 min)

Step 1 — Numbers (5 min)

Open DataSift Records, filter by date range = last 7 days, capture:

Metric	This Week	Last Week	Trend
Total new records (from autonomous runs)			
Probate			
Foreclosure			
Tax Sale (currently no preset)			
Total SMS sent			
Total calls made			
Conversations had (calls with >60 sec engagement)			
Hot leads escalated to Aaron			
Deals under contract (status = Under Contract)			
Deals closed (status = Closed)			
Deals lost (status = Dead)			

Don't worry about precision — ballpark is fine. The trend matters more than the absolute number.

Save these in a Google Sheet ("SiftStack Weekly Numbers") so you can see 12-week trends at a glance.

Step 2 — Wins + Misses (10 min)

Wins (3-5 bullets)

What worked this week? Be specific:

- "The Montgomery probate Day 1 SMS got a 22% response rate — way up from 12% last week"
- "Tier 1 phone scoring is dialing in — every Tier 1 call this week resulted in a conversation"
- "Aaron closed the Cridge probate deal — full pipeline path validated end-to-end"

Misses (3-5 bullets)

What didn't work? Be honest, not defensive:

- "Wasted 3 hours Tuesday on Franklin foreclosures with bad addresses — Smarty validation flagged 12/40 as undeliverable but I called anyway"
 - "Lost the Henderson lead because I didn't follow up by Thursday — they sold to someone else Friday"
 - "Greene County had 0 records all week — system says portal license is still disabled, no action available"
-

Step 3 — Issues + Asks (10 min)

Open issues (things broken or fragile)

Issue	Severity	Owner	Plan

Examples:

- "DataSift's Skip Trace returned weird numbers for 5 records this week — feels like an API hiccup, not our pipeline. Severity: low. Owner: monitor. Plan: continue, escalate if rate exceeds 10%."
- "Two Slack pings came in at 9:15 AM instead of 8:30 AM — both Tuesday and Thursday. Severity: medium. Owner: Aaron. Plan: check Apify run timing."
- "Tax Sale records (40+/week) have no preset workflow — they sit in DataSift with no automation. Severity: medium. Owner: Aaron. Plan: decide: build FTM_TaxSale presets or filter them out at scraper level."

Asks for Aaron

Things you need from him to do your job better:

- "Please confirm preset 7-9 (FTM_Probate_*) are now filtering on `ftm-probate` not `ftm-lp` — I think it changed but want to verify"
- "Can we get a Tier 0 score band (≥ 95) so I know which to dial *first* of the Tier 1s?"
- "I'd like a Slack ping when a `hot` tag goes through — I want a real-time alert vs checking DataSift"

Step 4 — Next-week priorities (5 min)

Pick 3 things to focus on next week. No more, no less.

1. _____
2. _____
3. _____

Examples of good priorities:

- "Test a longer SMS opener for foreclosure (Day 1) and measure response delta"
- "Catch up on the 47 callbacks scheduled for next week — block 9-11 AM Tue/Thu"
- "Backfill last week's `not_interested` records with notes — my dispositions were sloppy"

Examples of bad priorities (too vague):

- "Make more calls"
 - "Improve conversion"
 - "Be better at probate"
-

Output format — what to send Aaron

After the 30 minutes, paste this in Slack to Aaron:

```
📅 Weekly Review – Week of [Monday's date]

🇺🇸 Numbers:
- X new records (Y probate, Z foreclosure)
- X SMS, Y calls, Z conversations
- X hot leads escalated, Y deals closed, Z lost

🏆 Wins:
- [bullet]
- [bullet]
- [bullet]

⚠ Misses:
- [bullet]
- [bullet]

🔴 Open issues for you:
- [issue + ask]
- [issue + ask]

🎯 Next week priorities:
1. [priority]
2. [priority]
3. [priority]
```

Keep it tight. Aaron should be able to read it in 2 minutes and respond with adjustments.

What Aaron does with it

Within 24 hours (i.e., by Saturday afternoon), Aaron:

1. Reads the review
2. Replies with: validation of priorities, fixes for any flagged issues, adjustments to pipeline
3. If issues are systemic (e.g., scraper consistently broken on a county) — schedules a code change for the following Monday
4. If priorities are off — pushes back and re-aligns

This is the rhythm. Mike runs the daily, Aaron runs the system, Friday is when they sync.

Quarterly review (every 12 weeks)

Once per quarter, pull a longer view:

- 12-week trend on every metric (build the Google Sheet for this)
- Cost-per-deal-closed (total SiftStack ops cost ÷ deals closed in quarter)
- Conversion rates by source (probate vs foreclosure, by county)
- Cost-per-county (Franklin vs Montgomery vs Greene — does Greene justify continued investment?)
- Pipeline mix (% of deals from probate vs foreclosure vs tax sale)
- Mike + caller workload distribution

This is a 90-min sit-down with Aaron. Block it.
