

SOP — Cadences & DataSift Preset Specifications

Audience: Mike (preset + sequence builder), ISA, Aaron.

Purpose: Single reference for **what fires on what day across what channel** for each distress type. Mike uses this doc to build the DataSift filter presets and sequences. ISA uses it to know what's already happened on a record before they call.

This is the operational glue between:

- **What scrapers tag** ([SOP-TAG-FLOW.md](#))
 - **What gets sent** ([SOP-MAIL-TEMPLATES.md](#), [SOP-CALL-SCRIPTS.md](#))
 - **What it costs** ([SOP-DIRECT-MAIL-PLAN.md](#))
-

How DataSift sequences work (refresher)

A **preset** = filter logic. Records matching the filter appear in the preset's record list.

A **sequence** = automated cadence triggered when a record enters the preset. Each sequence step has:

- **Day offset** (Day 0 = entry into preset, Day N = N days later)
- **Action** (Send SMS / Send Mail via OpenLetter / Schedule Call / Add Tag / etc.)
- **Condition** (only fire if record still matches X — e.g. status still New)

Sequences fire automatically. Mike doesn't manually push them — he builds them once and the system fires touches per record per the timeline.

The two layers (read this once, then refer back)

There are TWO sequence layers running in parallel for every record:

1. **Mail_On_Entry** (global, fires Day 0) — sends ONE first-touch mail piece to every new mailable record, regardless of which preset they're in. Branches on `Notice Type` to pick Probate-1 / SS-1 / LP-1 / RW-1. Tags `mail_entry_sent` after firing. See [MIKE-MAIL-ENTRY-SETUP.md](#) for the build.
2. **Preset cadences** (per-preset: `FTM_Probate_Cadence`, `FTM_SS_Cadence`, `FTM_LP_Cadence`, `FTM_RW_Cadence`) — the existing sequences that handle Day 1 SMS, Day 1/2/3 ISA call, Day 30/60/90 follow-up mail, etc.

The Day 1 mail step in EACH preset cadence is gated — it only fires if the record does NOT have `mail_entry_sent` tag. This prevents duplicate sends. If a record hits `Mail_On_Entry`, the preset's Day 1 mail step skips. If a record somehow misses `Mail_On_Entry` (mailable=no, missing DPV, etc.), the preset cadence fires the Day 1 mail as a backup.

Bottom line: every mailable record gets exactly ONE Day 0 mail piece, then the preset cadence picks up at Day 30 onwards.

Universal stop-cadence rules (apply to ALL sequences)

These conditions halt remaining cadence steps for a record:

- Status = Sold / Closed / Dead / Under Contract / Offer / Appointment
- Tag do_not_mail applied
- Tag bankruptcy_stay applied
- Tag co_owner_blocked applied
- 3+ returned-mail count

Build these as cadence-wide filter exclusions, not per-step. DataSift typically supports a "sequence-level exit condition" — set it to: status in [Sold, Closed, Dead, Under Contract, Offer, Appointment] OR tag in [do_not_mail, bankruptcy_stay, co_owner_blocked] OR returned_mail_count >= 3.

1. Probate cadence — FTM_Probate_0H_<county>

Highest converting niche per industry data + lowest urgency. Build first.

Preset filter

Folder: 00 Niche Sequential Marketing

Build 3 presets (one per county):

Preset name	County filter
FTM_Probate_Franklin	County = Franklin
FTM_Probate_Montgomery	County = Montgomery
FTM_Probate_Greene	County = Greene

Common filter logic (applies to all three):

- Tag: ftm-probate (REQUIRED)
- Tag: Courthouse Data (REQUIRED — narrows to direct courthouse-sourced records)
- Status: New OR Contacted
- Tag: NOT Sold
- Tag: NOT do_not_mail
- Custom field: Owner Deceased = "yes"
- Custom field: DM 1 Status = "verified_living" (don't run cadence on records where we couldn't verify the executor is alive)
- Custom field: DPV match = Y (mailable)

Sort: Date Added DESC (freshest first).

Expected daily volume: 5-15 records/day across 3 counties combined. Spikes when probate court has busy filing weeks.

Sequence — FTM_Probate_Cadence

Day	Channel	Action	Stop if
0	DialForce	Bulk dial (already happens — no preset action needed)	n/a
0	SMS	Send Probate Day-1 SMS via Mike's tool	status changed
0	OpenLetter (Mail_On_Entry)	Probate-1 yellow letter — fires from global Mail_On_Entry sequence; tags mail_entry_sent	mailable, DPV=Y
1	ISA	Schedule call (Trestle Tier 0–3 phones only)	status changed
2	SMS	Send Probate Day-2 SMS	status changed
3	OpenLetter (preset cadence)	Send Probate-1 mail — BACKUP only, fires only if record does NOT have mail_entry_sent (catches records that bypassed Mail_On_Entry)	status changed AND NOT mail_entry_sent
3	ISA	Second call attempt	status changed
5	SMS	Send Probate Day-3 SMS final	status changed
7	ISA	Third call attempt	status changed
14	ISA	Status check call — if no engagement, mark low_motivation	n/a
30	OpenLetter	Send Probate-2 mail	status not New
30	ISA	Re-engagement call	n/a
60	OpenLetter	Send Probate-3 mail (final direct)	status not New
90	SMS	Send "still interested?" SMS	status not New
120	OpenLetter	Send Probate-4 nurture mail	status not New
210	OpenLetter	Send Probate-4 nurture mail (every 90 days)	status not New
300	OpenLetter	Send Probate-4 nurture mail	status not New

Total touches over 6 months: 14 (4 mail, 4 SMS, 6 calls).

Steady-state mail spend per probate record: 4 pieces × \$1.75 ≈ \$7 (then \$1.75/quarter for nurture).

2. Lis Pendens cadence — FTM_LP_OH_<county>

For records caught at the Common Pleas foreclosure case-filing stage. Long runway (4-12 weeks until sheriff sale), so cadence stays measured but progressively urgent.

Preset filter

Preset name	County filter
FTM_LP_Franklin	County = Franklin
FTM_LP_Montgomery	County = Montgomery
FTM_LP_Greene	County = Greene

Common filter:

- Tag: ftm-lp (REQUIRED)
- Tag: Courthouse Data
- Status: New OR Contacted
- Tag: NOT Sold
- Tag: NOT do_not_mail
- DPV match = Y

Sort: Date Added DESC.

Expected daily volume: 3-10 records/day across 3 counties (more after Franklin court busy days).

Sequence — FTM_LP_Cadence

Day	Channel	Action	Stop if
0	DialForce	Bulk dial	n/a
0	SMS	Foreclosure Day-1 SMS (per SOP-CALL-SCRIPTS)	status changed
0	OpenLetter (Mail_On_Entry)	LP-1 yellow letter — fires from global Mail_On_Entry sequence; tags mail_entry_sent	mailable, DPV=Y
1	OpenLetter (preset cadence)	LP-1 BACKUP only, fires only if record does NOT have mail_entry_sent	NOT mail_entry_sent
1	ISA	Live call attempt	status changed
2	SMS	Foreclosure Day-2 SMS	status changed
3	SMS	Foreclosure Day-3 SMS	status changed
5	ISA	Second call attempt	status changed
14	ISA	Re-engagement call	status not New
30	OpenLetter	Send LP-2 mail	status not New
30	ISA	Call attempt	status not New
60	OpenLetter	Send LP-3 mail	status not New
60	SMS	"Auction approaching" SMS	status not New
90	OpenLetter	Send LP-4 mail (final pre-auction)	status not New

Stage transition: when this record's auction date appears (RealAuction scraper picks up the sheriff sale listing), it gets the `ftm-ss` tag. The LP cadence keeps running, but the SS cadence ALSO fires from Day 0 of the SS preset entry. Records can be in both presets simultaneously — that's intentional, the urgency layered on top of the long-runway nurture.

Total touches over 90 days: ~12 (4 mail, 4 SMS, 4 calls).

3. Sheriff Sale cadence — FTM_SS_OH_<county>

For records where the auction is scheduled. Cadence compresses to days, not weeks. Auction date is the deadline.

Preset filter

Preset name	County filter
FTM_SS_Franklin	County = Franklin
FTM_SS_Montgomery	County = Montgomery
FTM_SS_Greene	County = Greene

Common filter:

- Tag: `ftm-ss` (REQUIRED)
- Tag: `Courthouse Data`
- Tag: NOT `redemption_open` AND NOT `redemption_closing` AND NOT `redemption_closed`
(Once the sale has happened, records flow into FTM_RW_* presets. They leave the SS preset automatically.)
- Status: `New` OR `Contacted`
- Tag: NOT `Sold`
- Custom field: `Foreclosure Date` (auction date) is set AND $\geq$ today

Sort: `Foreclosure Date` ASC (closest auction first — most urgent on top).

Expected daily volume: 5-25 records/day depending on auction-week scheduling.

Sequence — FTM_SS_Cadence

Day from preset entry	Channel	Action	Stop if
0	DialForce	Bulk dial	n/a
0	SMS	Foreclosure Day-1 SMS	status changed
0	OpenLetter (Mail_On_Entry)	SS-1 yellow letter — fires from global Mail_On_Entry sequence; tags mail_entry_sent	mailable, DPV=Y
1	OpenLetter (preset cadence)	SS-1 BACKUP only, fires only if record does NOT have mail_entry_sent	NOT mail_entry_sent
1	ISA	Live call	status changed
2	SMS	Foreclosure Day-2 SMS	status changed
3	SMS	Foreclosure Day-3 SMS (urgency)	status changed
5	ISA	Second call	status changed
7	OpenLetter	Send SS-2 mail (concrete offer)	status not New
14	ISA	Re-engagement	status not New

Time-to-auction urgency triggers (these fire based on Foreclosure Date , not preset entry date):

| Days to auction | Channel | Action |

|---|---|---|

| 14 | SMS | "2 weeks to auction" reminder |

| 7 | OpenLetter | Send SS-3 mail (final urgency) |

| 7 | ISA | Daily call attempt |

| 3 | SMS | Daily SMS until auction |

| 1 | SMS + ISA | Final SMS + final ISA call |

Total touches per record (from preset entry to auction, 4-8 weeks typical): 12-18 (3 mail, 6-10 SMS, 4-5 calls).

4. Redemption Window cadences — FTM_RW_OH_*

The crown jewel niche per [SOP-REDEMPTION-WINDOW.md](#). Two presets — one for normal-urgency open windows, one for closing-fast (≤ 14 days) windows.

Preset 1: FTM_RW_OH_Redemption_Open

Filter:

- Tag: `ftm-rw` (REQUIRED)
- Tag: `redemption_open` (REQUIRED)
- Tag: NOT `redemption_closing` (this preset is the >14-day-out group)
- Status: `New` OR `Contacted`
- Tag: NOT `Sold`
- Tag: NOT `do_not_mail`
- Tag: NOT `bankruptcy_stay`

Sort: `Redemption Days Remaining` ASC.

Preset 2: FTM_RW_OH_Redemption_Closing

Filter:

- Tag: `ftm-rw` AND `redemption_closing` (REQUIRED — both)
- Status: `New` OR `Contacted` OR `Interested`
- Tag: NOT `Sold`
- Tag: NOT `bankruptcy_stay`

Sort: `Redemption Days Remaining` ASC.

This preset is Mike's morning Priority #1. Records here have ≤ 14 days until the court closes the window. This preset gets worked before any other preset every single morning.

Sequence — FTM_RW_Cadence (fires for BOTH presets)

The cadence is identical across both presets — what differs is the mail vendor's shipping speed (standard mail for `Open`, FedEx 2-day for `Closing`). OpenLetter handles that branching internally based on the record's tag.

Day from preset entry	Channel	Action	Notes
0	DialForce	Bulk dial	already happens
0	SMS	Redemption Day-1 SMS	per SOP-REDEMPTION-WINDOW
0	ISA	Live call attempt	Trestle Tier 0-3 phones
0	OpenLetter (Mail_On_Entry)	RW-1 — standard mail OR FedEx 2-day if redemption_closing tag present; tags mail_entry_sent	mailable, DPV=Y
1	OpenLetter (preset cadence)	RW-1 BACKUP only, fires only if record does NOT have mail_entry_sent	NOT mail_entry_sent
2	SMS	Redemption Day-2 SMS	reinforce legal right
3	ISA	Second call	
5	SMS	Redemption Day-5 SMS	window-narrowing message
5	ISA	Third call	
7	ISA	Fourth call	
10	SMS	Redemption Day-10 SMS	urgency escalation
10	ISA	Fifth call	
14	SMS + ISA	Final SMS + escalation call	last shot before confirmation

Door-knock day (deferred pending Aaron + Travis alignment per [SOP-REDEMPTION-WINDOW](#)). When/if approved, slot in at Day 5-7 of the cadence.

Time compression for Closing records: if a record enters the FTM_RW_Closing preset with only 5 days until confirmation, the cadence above is too slow. Build a SECOND sequence variant

FTM_RW_Cadence_Compressed that fires when Redemption Days Remaining ≤ 7 :

- All touches collapsed into days available
- Mail goes FedEx Overnight (vs 2-day)
- ISA calls daily until window closes

DataSift may need a sequence-condition that auto-switches. If not, Mike adds a manual check each morning: any record in Closing preset with Redemption Days Remaining ≤ 7 gets manually moved to compressed cadence.

Total touches per record over 14 days: ~12 (1-2 mail pieces, 5-6 SMS, 5-6 calls).

Cadence interaction matrix

What happens when the same record qualifies for multiple presets:

Stage progression	Preset(s) record sits in	Behavior
Lis pendens filed	FTM_LP_*	LP cadence runs
Auction listed (still pre-sale)	FTM_LP_* AND FTM_SS_*	BOTH cadences run in parallel — long nurture from LP + urgency from SS
Auction held (sale day passed, redemption open)	FTM_RW_OH_Redemption_Open ONLY (filter excludes redemption-tagged from FTM_SS)	RW cadence runs; SS cadence stopped automatically
Confirmation hearing scheduled ≤14 days	FTM_RW_OH_Redemption_Closing (in addition to Open via the dual-tag rule)	Both presets show the record; both cadences fire — same touches but DataSift dedups so each touch only fires once
Sale confirmed	NONE — redemption_closed tag retires from all presets	All cadences stop; record retires
Status flipped to Sold/Closed/Dead	NONE	All cadences stop universally

Pre-launch checklist (Mike, ~3 hours total)

Before the first daily run hits Mike's desk, build everything in this order:

1 — Filter presets (~45 min)

- [] FTM_Probate_Franklin / _Montgomery / _Greene (3 presets, ~5 min each)
- [] FTM_LP_Franklin / _Montgomery / _Greene (3 presets)
- [] FTM_SS_Franklin / _Montgomery / _Greene (3 presets)
- [] FTM_RW_OH_Redemption_Open (1 preset, statewide)
- [] FTM_RW_OH_Redemption_Closing (1 preset, statewide)

2 — OpenLetter mail templates (~2 hours)

Per [SOP-MAIL-TEMPLATES.md](#):

- [] Probate-1, Probate-2, Probate-3, Probate-4 (4 templates)
- [] LP-1, LP-2, LP-3, LP-4 (4 templates)
- [] SS-1, SS-2, SS-3 (3 templates)
- [] RW-1 (1 template, but 2 shipping triggers — standard vs FedEx)

3 — Sequence builds (~45 min total)

- [] **Mail_On_Entry** (global, not preset-attached) — builds per [MIKE-MAIL-ENTRY-SETUP.md](#).
Branches on **Notice Type** to send Probate-1 / SS-1 / LP-1 / RW-1. Tags **mail_entry_sent** after firing.
- [] **FTM_Probate_Cadence** (link to Probate preset) — Day 1 mail step gated on **NOT mail_entry_sent**
- [] **FTM_LP_Cadence** (link to LP preset) — Day 1 mail step gated on **NOT mail_entry_sent**
- [] **FTM_SS_Cadence** (link to SS preset) — Day 1 mail step gated on **NOT mail_entry_sent**
- [] **FTM_RW_Cadence** (link to BOTH RW presets) — Day 1 mail step gated on **NOT mail_entry_sent**
- [] **FTM_RW_Cadence_Compressed** (manual trigger fallback, see RW section above)

4 — SMS template setup (~15 min)

Load the SMS templates from [SOP-CALL-SCRIPTS.md](#) and [SOP-REDEMPTION-WINDOW.md](#) into Launch Control / REISimpli (Mike's SMS tool). Reference the cadence Day-N triggers above.

5 — Verify

- [] Send a test record through each preset manually (Mike picks one record from each list, watches the cadence trigger Day 0 actions)
- [] Verify variable substitution works (does **{{first_name}}** populate, does **{{confirmation_date}}** show on RW pieces?)
- [] Verify stop-cadence: change a test record's status to **Sold**, confirm remaining sequence steps cancel

Steady-state daily counts (estimates for capacity planning)

What Mike sees on a typical morning, 30 days into Phase 1 launch:

Preset	Records	Mike's actions
FTM_RW_Closing	0–5	PRIORITY #1 — work first, every morning
FTM_RW_Open	5–15	Priority #2
FTM_Probate_* (3 counties combined)	30–60 active	Priority #3
FTM_SS_* (3 counties combined)	50–150 active	Priority #4
FTM_LP_* (3 counties combined)	80–200 active	Priority #5 (nurture-paced)

Mike's daily working capacity: ~30–50 active touch-points (calls + SMS replies + lead qualification). The "best 250 per county" lead-scoring layer (queued for build per [MASTER-PLAN.md](#)) will narrow this to a manageable ~35-process/day target matching the Master Planner goal.

When something looks wrong

- **A preset is empty for >2 days when it should have records:** see [SOP-RED-FLAGS.md](#) §13 (specifically for redemption window) and §4 (general tag drift).
- **A sequence is not firing on Day-0 entry:** check that the record actually entered the preset (manual filter test); if yes, check sequence is enabled + linked to the correct preset.
- **Variable substitution shows literal `{{first_name}}` in sent mail:** OpenLetter variable name mismatch — re-check against the variable reference in [SOP-MAIL-TEMPLATES.md](#).
