

SOP — Daily Operations (Mike's Morning Playbook)

Audience: Data Manager (Mike) and Owner (Aaron).

Purpose: Everything that happens between 6:00 AM and 9:00 AM every day, what you should see when you walk in, and the exact daily DataSift workflow.

The 3-hour automation window (no human required)

Every morning the SiftStack Apify Actor wakes at **6:00 AM ET** and runs unattended. By the time you start at 9:00 AM, all of this has already happened in the cloud:

```
06:00 AM  Apify Actor wakes
06:00-06:30  Scrape 6 Ohio portals (Franklin / Montgomery / Greene x probate / foreclosure)
06:30-07:00  Dedupe + run 10-step enrichment pipeline:
               -Smarty (USPS validation, ZIP+4, geocode, vacancy detection)
               -OH County Auditor (probate property lookup – fills decedent's address)
               -Zillow / OpenWebNinja (Zestimate, MLS status, equity, beds/baths/sqft)
               -Obituary search (DOD, heir map, decision-maker ranking, DOD sanity check)
               -Tracerfy skip trace (phones + emails for executor + heirs)
               -Trestle phone scoring (5-tier dial priority)
07:00-07:30  Generate per-record PDF deep-prospecting reports (deceased / heir / DM cases)
07:30-07:45  Format 41-column CSV, upload to DataSift via Playwright
07:45-08:15  DataSift runs Enrich Property Info + Skip Trace in background
08:15-08:30  Final tag verification + list assignment
08:30 AM     Slack/Discord summary posted to your channel
```

By 8:30 AM new Ohio leads are sitting in DataSift, tagged, listed, skip-traced, phone-tier-scored, with PDF deep-prospecting reports attached. Your laptop does not need to be on.

Where to look first thing (in order)

1. Slack/Discord channel — your 8:30 AM summary

The morning post is the single source of truth. It looks like this:

🇺🇸 SiftStack Ohio Daily – 2026-04-27

📊 Summary:

47 new records (22 probate, 25 foreclosure)
8 deceased owners with completed heir maps
\$4.18 enrichment spend (Tracerfy + Trestle)

📍 By county:

Franklin	21 records	(12 probate, 9 foreclosure)
Montgomery	18 records	(8 probate, 10 foreclosure)
Greene	8 records	(0 probate*, 8 foreclosure)

*portal license disabled at source

☎ Phone tiers (decision-makers only):

Tier 1 (81-100, Dial First):	19	★
Tier 2 (61-80, Dial Second):	14	
Tier 3 (41-60, Dial Third):	8	
Tier 4 (21-40, Dial Fourth):	4	
Tier 5 (0-20, Drop):	2	

🏆 Top 5 by phone score:

1. PATRICIA CRIDGE (Montgomery probate) – DM: JONATHAN CRIDGE – 95
2. WILLIAM LONG (Montgomery probate) – DM: JACQUELINE LONG – 92
3. ...

If you don't see this post by 8:45 AM, see [SOP-RED-FLAGS.md](#) — Section 1.

2. DataSift — `app.reisift.io/dashboard`

Login. You should see:

- New records in **Probate** list (today's date)
- New records in **Foreclosure** list (today's date)
- All records have `Courthouse Data` tag (this is the niche sequential trigger)
- Deceased records have `deceased` tag + DM confidence tag (`high_confidence` / `medium_confidence` / `low_confidence`)

3. Reports folder — `output/reports/` (local) or Google Drive (if configured)

PDF deep-prospecting reports for each deceased / heir / DM record. Open the highest-priority leads (Tier 1 phone tiers) and skim the signing chain before your first call.

Mike's daily workflow

Once you've read the Slack summary and done your DataSift triage, here's the standard order of operations.

Step 1 — Triage (8:30–9:00 AM)

In DataSift, filter to **today's new records** and sort by phone tier.

- **Tier 1 (81-100)**: SMS today, follow with phone today
- **Tier 2 (61-80)**: SMS today, follow with phone tomorrow
- **Tier 3 (41-60)**: SMS first, phone if no response in 48 hrs
- **Tier 4 (21-40)**: Mail-only sequence
- **Tier 5 (0-20)**: Drop, do not contact (litigator risk or junk number)

Step 2 — Niche sequential setup (9:00–9:30 AM)

The 12 niche sequential presets handle the SMS → Call → Mail → Deep Prospecting cadence automatically. Today's records get picked up by:

- **00. Needs Skipped** — if any records lack phones (rare with Tracerfy)
- **01. SMS Day 1** — Tier 1 + Tier 2 records → SMS goes out
- See [SOP-TAG-FLOW.md](#) for the full preset → record matching map

Verify each preset has the expected count:

```
DataSift → Records → Filter → Apply Preset "01. SMS Day 1"
```

If counts look wrong (e.g., 0 records when Slack said 19 Tier 1s), see [SOP-RED-FLAGS.md](#) — Section 4 (Tag Drift).

Step 3 — High-value lead review (9:30–10:30 AM)

Open PDFs for the top 5 records by phone tier. Each PDF contains:

- Property summary (address, Zestimate, equity, beds/baths)
- Owner / decedent info
- Signing chain (PR/executor + ranked heirs with relationships)
- All phones with tiers + emails
- Deep-prospecting notes (DOD, obituary URL, heir verification status)

Read these BEFORE you make the first call — knowing the signing chain prevents wasted calls to the wrong person.

Step 4 — Cold outreach (rest of morning)

Standard niche sequential cadence. The system has already pre-loaded scripts and templates in DataSift's **26 TCA sequence templates** (Lead Management 6, Acquisitions 6, Transactions 6, Deep Prospecting 4, Default 4).

For probate calls:

- **Always speak to the PR/executor**, never the decedent
- **Open with the property** ("I saw you're handling [decedent]'s estate, and I noticed they had a property at [address]")
- **The PR may not have visited the property recently** — be prepared to explain condition / value

For foreclosure calls:

- **Speak to the homeowner (defendant)**, not the bank (plaintiff)
- **Sale date is in the record** — match urgency to days-until-auction
- **Ohio is judicial foreclosure** — there's a redemption period after the sheriff sale, more time than non-judicial states

Step 5 — Update DataSift status throughout the day

Move records through the 9-status pipeline:

- **New → Contacted → Interested → Appointment → Offer → Under Contract → Closed → Dead → Sold**

Tag pattern enforced by the system:

- `contacted_YYYY-MM-DD` when first contact made
- `interested` when they engage positively
- `appointment_YYYY-MM-DD` when calendar booked

These tags drive the next-day filter presets — don't skip them.

Step 6 — End-of-day cleanup (4:30–5:00 PM)

Run the **Sold Property Cleanup** sequence (in Transactions folder) — it auto-fires on the `Sold` tag and:

- Changes status to Sold
- Removes from active lists
- Clears assigned tasks
- Clears assignee

If you closed any deals today, manually tag `Sold` on those records before logging off.

What you do NOT need to do

The system handles all of this — don't manually do it:

- **✗** Pull data from courthouse websites (the 6 scrapers do this)
- **✗** Look up property addresses for probate decedents (the OH Auditor lookup does this)

- **✗** Standardize addresses or check ZIP+4 (Smarty does this)
- **✗** Search obituaries for DOD or heirs (obituary enricher does this, with 3-year DOD sanity check)
- **✗** Manually skip-trace phones / emails (Tracerfy does this)
- **✗** Score phones for tier priority (Trestle does this)
- **✗** Generate PDF deep-prospecting reports (the report generator does this)
- **✗** Format the DataSift upload CSV (the formatter does this — 41 columns)
- **✗** Manually create lists or tags in DataSift (auto-created from CSV column data)

If you're spending more than 15 minutes/day on any of the items above, **that's a red flag** — see [SOP-RED-FLAGS.md](#).

Manual override paths (when you need them)

You should rarely need these, but they exist:

Run a single source manually

```
cd /Users/aaron/Desktop/SiftStack
source venv/bin/activate
PYTHONPATH=src python -m scrapers.oh_montgomery_probate --days 7
```

Run the full daily pipeline manually (catches missed run)

```
python src/main.py daily --upload-datasift --notify-slack
```

Re-enrich an existing CSV (e.g., before pushing to DataSift after a network blip)

```
python src/main.py csv-import --csv-path output/some_file.csv --csv-county Montgomery
```

Scrape historical data (if onboarding new market or backfilling)

```
python src/main.py historical --counties Franklin --types probate --upload-datasift
```

Daily checklist (printable)

- ☐ 8:30 AM – Slack summary received
- ☐ 8:45 AM – Open DataSift, verify today's record counts match Slack
- ☐ 9:00 AM – Phone-tier triage complete (Tier 1 + 2 prioritized)
- ☐ 9:30 AM – Niche sequential presets verified (counts match)
- ☐ 10:30 AM – Top 5 PDFs reviewed
- ☐ Cold outreach started by 11:00 AM at the latest
- ☐ DataSift status updated as conversations progress
- ☐ 4:30 PM – Sold Property Cleanup sequence run if any deals closed
- ☐ 5:00 PM – End of day, log out

If any morning step fails or the count looks off, [SOP-RED-FLAGS.md](#) tells you what to check and who owns the fix.
